

# A SAFER, MORE EFFICIENT EMERGENCY TOWING SYSTEM

*Existing emergency tow systems rely on a single attachment point, which can put deck hardware under unusual stress, particularly in foul weather.*

## Be prepared with Samson's Emergency Vessel Attachment System

EVATS™ is designed to overcome some of the most dangerous aspects of rescue towing, allowing faster deployment and rigging, safer operations for vessel crews, and a more secure connection.

A flexible system, EVATS can be deployed from either ship's deck, by helicopter, or rescue vessel. Available in 150 mt, 200 mt, and 300 mt sizes, EVATS was designed for multiple attachment configurations and has near-universal compatibility with each ship's mooring gear arrangements, even when deck machinery is non-functional.
