Wildlife Hazing and Rehab

Application	Specifications	
ACN maintains hazing and rehab equipment, primarily for avian species. These kits may be used by contract personnel to reduce the risk of oiling to local wildlife or to capture and treat oiled or injured animals. Hazing kits are packaged in metal Knaak toolboxes. Capture kits are packaged in fish totes. The otter pens are stored in a 40 foot trailer.	**Hazing kits**	Passive devices: mylar tape and balloons. Active devices: Propane cannon and pyrotechnic noisemakers.
	Bird & otter capture	Pet carriers, and medical supplies to stabilize animals.
	Otter pens	Floating pens for holding un-oiled animals.
	Rodent kit	Rat traps to reduce risk of rat infestation of remote islands.

Operational parameters	Support equipment	Additional information
Trained personnel, with appropriate permits, must be available to implement a hazing plan and operate this equipment.		Pyrotechnic hazing devices are not appropriate in areas where an explosive environment is possible. Hazing kits contain hazardous materials for air transportation.
